**Attachments:** 3.15.2019 USS Irvin Works 114.pdf

Hi Pat,

Attached is the CAA 114 Information Request Letter that we sent to US Steel Irvin Works with questions about the flares that they have in operation there. We were concerned that with the extra coke oven gas being vented from Clairton Works to the flares at Irvin Works they the flares might not be operating as efficiently as they should resulting in excess emissions.

Let me know if you have any questions or would like to discuss the situation at the Clairton Works facility.
